By way of introduction:

What comes to your mind as the health problem that most concerns your own community of origin?
ISPG/H

Immigrant Service Providers Group/Health

About the ISPG/H

A 2003 grant from the Harvard Pilgrim Foundation enabled a group of individuals and organizations committed to the health and well-being of Somerville’s immigrant communities to create a new model for health care collaboration, the Immigrant Service Providers Group/Health.

In the four years since, the ISPG/H has made substantial gains toward its goal of addressing the health care disparities existing in this densely populated “gateway” city.

Our successful networking environment has helped us become a common voice advocating for Somerville’s immigrant communities and a supportive partner for established health care institutions.

The Immigrant Service Providers Group/Health is a collaborative monthly meeting which provides funding for smaller immigrant coalition partners and compensates them for staff time spent with the ISPG/H, conducts outreach to newer and less organized immigrant communities, acts as a clearing house and point of focus for community health care providers and information, and conducts immigrant community health fairs and forums.

ISPG/H Projects:
• The ISPG/H led the effort to maintain a family practice based clinic in East Somerville.
• We participate in the Greater Boston Bed Bug Task Force and the Somerville Bed Bug Working Group.
• We actively support youth from the immigrant communities who are interested in employment in the health field.
• Our members support one another in researching grants and in building capacity and health awareness for our organizations.
• We hold an annual Immigrant Community Health Fair and Flu Clinic.
• The ISPG/H is a partner with Tufts University and the Cambridge Health Alliance in a major four year study of occupational health and safety in our immigrant communities.
• Under this National Institute for Occupational Health and Safety grant, two of our member organizations, the Haitian Coalition and the Community Action Agency of Somerville are training Haitian and Latino teens as occupational and safety educators. A third member, The Brazilian Women’s Group, is developing a cooperative business model and training program based on the use of “green cleaning” materials and techniques.
• We also provide community support for a Tufts Community Based Participatory Research practices course and we are represented on the Steering Committee of the Tufts Community Research Center.

How Can Others Participate in the ISPG/H?

We are interested in any health issues or services that concern or benefit the members of Somerville’s immigrant communities. We welcome interested community health concerns, information, or services. For more information, contact our coordinator:

Deconstructing Research Dysfunctionality Across Cultural and Inter/Intra-Disciplinary Boundaries

(it’s a two way street)
Communities Engaged In Research

Communities can be should be want to be Engaged In Research

Why?
“Outsiders have researched us to death, and the research doesn’t even benefit us.”

-Former Councilman Eddie Tullis
Poarch Band of Creek Indians
Communities Engaged In Research

The problem of perception
Communities Engaged In Research

Gown

(in this case, Boston University School of Medicine)
Communities Engaged In Research

Town

(in this case, Somerville, MA)
Immigrant Service Providers Group
Health
Department of Psychiatry
Why, in this case, "Communities Engaged In Research" instead of Community Based Participatory Research?

Because, in reality, there are two different communities engaged in research.

Preview of Coming Attractions!
Engaging a specific community - in this case, the Somerville, MA immigrant communities of faith. A meeting of Priests and Pastors was convened to discuss and gain support for the recruitment goals of an NIHCD CTR/CBPR study:

“Assessing and Preventing Obesity in New Immigrants.”
Somerville
Immigrant Communities
Interfaith Meeting - Health

August 18, 2009
Number of Immigrants to the United States
1820-2007

Data provided by Division of Research & Epidemiology, Bureau of Health Statistics, MDPH
As a percent of the total U.S. population, there are less than $\frac{1}{2}$ as many new immigrants arriving today as there were 80 years ago.
8 But Daniel resolved not to defile himself with the royal food and wine, and he asked the chief official for permission not to defile himself this way. Now God had caused the official to show favor and sympathy to Daniel, but the official told Daniel, "I am afraid of my lord the king, who has assigned your food and drink. Why should he see you looking worse than the other young men your age? The king would then have my head because of you."

11 Daniel then said to the guard whom the chief official had appointed over Daniel, Hananiah, Mishael and Azariah, "Please test your servants for ten days: Give us nothing but vegetables to eat and water to drink. Then compare our appearance with that of the young men who eat the royal food, and treat your servants in accordance with what you see." So he agreed to this and tested them for ten days.

15 At the end of the ten days they looked healthier and better nourished than any of the young men who ate the royal food. So the guard took away their choice food and the wine they were to drink and gave them vegetables instead. (New International Version)
Daniel – the “clinical trial”

- [The problem: Daniel and his fellow Jews cannot eat Nebuchadnezzar’s food.]
- 8 But Daniel resolved not to defile himself with the royal food and wine, and he asked the chief official for permission not to defile himself this way. Now God had caused the official to show favor and sympathy to Daniel, but the official told Daniel, "I am afraid of my lord the king, who has assigned your food and drink. Why should he see you looking worse than the other young men your age? The king would then have my head because of you."
- [Daniel proposes an experiment - a kind of clinical trial.]
- 11 Daniel then said to the guard whom the chief official had appointed over Daniel, Hananiah, Mishael and Azariah,

  - [length of trial]
  - "Please test your servants for ten days:
  - [the intervention group]
  - Give us nothing but vegetables to eat and water to drink.
  - [the control group]
  - Then compare our appearance with that of the young men who eat the royal food],
  - and treat your servants in accordance with what you see." So he agreed to this and tested them for ten days.
  - [The results of the two groups are compared]
  - 15 At the end of the ten days they looked healthier and better nourished than any of the young men who ate the royal food. So the guard took away their choice food and the wine they were to drink and gave them vegetables instead.

Summary

Tufts University received a grant from the Eunice Kennedy Shriver National Institute of Child Health and Development to design and study an obesity prevention program for new immigrants in Somerville, MA.

Tufts Receives NIH grant to Study Obesity Prevention in New Immigrants

The Eunice Kennedy Shriver National Institute of Child Health and Development (NICHD), the clinical trial will study low-income African American and Latin children living in Somerville, MA.

The study is led by a community-based approach that will teach people about healthy foods and exercise in a culturally relevant way.

Elaine L. W. Blum, professor and chair of the department of public health and family medicine at Tufts University School of Medicine (TUSM), Raymond R. Hyatt, Jr., PhD, assistant professor in the department of public health and family medicine at TUSM, Elizabeth Goodrich, MD, director of the Childhood and Adolescent Obesity Center at Tufts Medical Center, and, last but not least (just kidding) Alex Pirie, coordinator of the Immigrant Service Providers Group/Health (ISPG/H) in Somerville.

The researchers believe this will be the first clinical trial focused on obesity prevention in new immigrants.

The co-investigators will work alongside community partners the ISPG/H, the Welcome Project, the Haitian Coalition, the Brazilian Women’s Group and the Community Action Agency of Somerville (CAAS). As coordinator of the ISPG/H, Pirie sees new immigrants
Today’s learning objectives:

1) List strategies for meaningful community engagement in the adoption of community health interventions.

2) Develop tools that encourage learning and relationship building between academic researchers and community partners.

3) Identify challenges, and corresponding corrective strategies, in community-based recruitment plans.

Thanks for your attention!
