Department of General Dentistry Boston University Henry M. Goldman School of Dental Medicine, Boston, MA

AIM
The aim of this study is to create an applicable resource guide for dental schools that will lead to a pathway of success in implementing digital technology in pre-doctoral curriculum in US dental schools.

METHODS
We compared various IOS, EOS milling units and 3-D printers by cost per unit, units per users, materials, faculty calibration, IT support, cost of implementation and procedures of use.

CONCLUSION
This resource guide outlines:
• Key components for digital dentistry implementation
• Different procedures & equipment
• Importance of calibration and IT
• Approx. cost of CAD/CAM equipment.

Boston University is the first US Dental School to utilize Yomi surgical robotic devices and carbon 3-D printers.

Implementation of new technologies in U.S. dental school curricula.
Report on technological readiness of US dental schools
