

Infectious Disease Section High Productivity Individual Incentives

I would like to provide to all faculty who exceed the RVU target - in a linear fashion rather than threshold. This allows a tangible and achievable incentive for all.

Infectious Disease Section Quality Metrics

Nature of the Project

- Design a “real time” individual provider dashboard to indicate individual rates of compliance with standard HIV performance measures
- Within dashboard provide comparison of providers’ rates of compliance as compared to other providers in the practice
- Track and assess improvement in rates of compliance based on implementation of dashboard feedback

Objectives

- To improve overall adherence rates as a provider group in the Center for Infectious Diseases (CID) to HIV quality measures
- To improve individual provider rates of adherence to HIV quality measures; define a measurable target goal increase
- Increase quality of care of the CID HIV-infected patient population as measured by improved outcomes that could be related to increase in adherence to HIV quality measures
