Assistant Professor, Department of Biochemistry
Tracking Code
6243
Job Description

Teach graduate courses in biochemistry and cell and molecular biology; conduct biochemistry and molecular biology research in cancer and developmental biology, with a focus on cell-signaling pathways; train and mentor undergraduates, graduate students, and postdoctoral researchers; disseminate scientific findings through publication in scientific journals and presentation at professional/academic meetings; provide service to the University through committee work and program development.

Required Skills

Must have Ph.D. in biochemistry or a related field and demonstrated research ability as shown by peer-reviewed publications in the areas of developmental biology and cancer research, including research into cell-signaling pathways.
