UNHEALTHY ALCOHOL AND OTHER DRUG USE: SCREENING AND ASSESSMENT

Richard Saitz MD, MPH, FACP, FASAM
Professor of Medicine & Epidemiology
Boston University Schools of Medicine & Public Health
Director, Clinical Addiction, Research and Education (CARE) Unit
Boston Medical Center
UNHEALTHY USE

Case

A 36 year old resident enjoys 2-3 beers 2-3 times a week after work
# Injury and Alcohol

<table>
<thead>
<tr>
<th></th>
<th>Population attributable fraction (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Alcohol dependence</td>
<td>4.0</td>
</tr>
<tr>
<td>Non-dependent use</td>
<td>6.6</td>
</tr>
</tbody>
</table>

Risky Amounts

- Men
  - >14 drinks per week, >4 per occasion
- Women, >65
  - >7 drinks per week, >3 per occasion

Drugs: Any?
Never exceed the daily or weekly limits
(2 out of 3 people in this group abstain or drink fewer than 12 drinks a year)

More than 8 out of 10 in this group exceed the daily limit less than once a week

8 out of 10 in this group exceed the daily limit once a week or more

Prevalence (US)  Abuse/dependence

fewer than 1 in 100
72%

1 in 5
16%

almost 1 in 2
10%
LOW RISK USE

Evidence for benefit insufficient for a preventive recommendation which would likely apply to few people anyway (though reassuring for those who drink)

No RCT so dose, harms, benefits unclear

Carcinogen

Based on (many) epidemiological studies with serious problems

*like HRT

e.g.

Low consumption associated with myriad good health markers
Brief time periods of drinking assessed
Quantity and frequency poorly characterized
Sick quitters (not same as abstainers but often mixed)
Occasional drinkers mixed with either abstainers or more frequent drinkers
‘Single’ Item (Alcohol)

- “Do you sometimes drink beer wine or other alcoholic beverages?”
- “How many times in the past year have you had 5 (4 for women) or more drinks in a day?”
  
  • +answer:>0
  • 82% sensitive, 79% specific for unhealthy use
Alcohol Use Disorders Identification Test
Consumption items (AUDIT-C)

The AUDIT-C is scored on a scale of 0-12 (scores of 0 reflect no alcohol use). In men, a score of 4 or more is considered positive; in women, a score of 3 or more is considered positive. Replace six with four for women, in item 3.

- Requires scoring
- >3 women, >4 men
  - 73-86% sensitivity
  - 89-91% specificity
- >7 to 12 suggests dependence

3%
34%
7%
56%

Use
Use w/Prob
Abuse
Dep

SINGLE ITEM, OTHER DRUGS

“How many times in the past year have you used an illegal drug or used a prescription medication for non-medical reasons?”

- If asked to clarify the meaning of “non-medical reasons”, add "for instance because of the experience or feeling it caused”
- A response of ≥1 is considered positive
- 100% sensitive, 74% specific for drug use disorder, similar to 10-item DAST (n=286)
- 93% and 94% for past-year drug use
  - 82%, 96%, respectively, for saliva test or self-report
OTHER SCREENING TESTS TO BE AWARE OF

- Adolescents: 2-items (see NIAAA website), CRAFFT (disorders)
- Geriatrics: CARET, G-MAST
- Pregnancy: TWEAK, T-ACE, 4Ps Plus (use, Pregnancy, use by Parents and Partners)
  
  Note: here we want to identify ANY use (children, pregnancy)

Other tests, formerly known as screening tests…to be aware of

- CAGE, CAGE-AID, 2-item conjoint
- AUDIT
- DAST
- ASSIST
- May want to use these as severity assessments
LABORATORY TESTS

- **Useful**
  - detect (heavy) use (usually recent)
  - overdose, intoxication, poisoning
  - screening trauma patients
  - assessment and monitoring

- **Not so useful**
  - screening for unhealthy use
  - general health care settings
  - less sensitive for potent substances like LSD, fentanyl, psilocibin, ecstasy, amphetamines, designer drugs, THC, PCP, etc.

- “Routine screen” (urine, serum)
  - Opiates (less often ‘-oids’)
  - Cocaine
  - Benzodiazepines
  - Barbiturates
  - Alcohol
  - ACTM
  - ASA

- Less available/need to request opioids, other specific drugs
URINE DETECTION TIME

• Up to 30 days
  • Benzodiazepines, long-acting (metabolites)
  • Long-term PCP or marijuana use
• 2-4 days
  • Amphetamine, methamphetamine, short-acting barbiturates, methadone
• 1-3 days
  • Marijuana, heroin, codeine, cocaine, morphine
POSSIBLE UTILITY OF URINE SCREEN

- 415 young adult men urban walk-in clinic (89% uninsured)
- 39% positive urine cocaine
  - 72% denied cocaine use in past 3 days
    - 86% denied “illegal drug use”
    - 61% denied “any form of cocaine use”

SALIVA, SWEAT, HAIR

- Newer less available more costly technologies
- Saliva similar to urine, briefer detection time
- Sweat and hair: risk environmental contamination, longer term/cumulative use
Assess for dependence (DSM IV)

- Impaired control / Preoccupation
  - A great deal of time getting, using, recovering
  - Activities given up or reduced
  - More or longer than intended
  - Cannot cut down or control
  - Use despite knowledge of health problem

- Withdrawal
  - Symptoms, using to relieve symptoms

- Tolerance
  - Increased amounts to achieve effect
  - Diminished effect from same amount

Addiction: loss of control, compulsive use, use despite harm, a brain disorder [www.asam.org]
Alcohol use disorder (DSM 5)

*no more “abuse” or “dependence”*

2 or more in 12 mo; 4 or more=severe (proposed)

- recurrent use resulting in a failure to fulfill major role obligations at work, school, or home
- recurrent use in situations in which it is physically hazardous
- continued use despite having persistent or recurrent social or interpersonal problems
- [legal deleted]
- tolerance
- withdrawal
- use in larger amounts or over a longer period than intended
- persistent desire or unsuccessful efforts to cut down
- a great deal of time is spent obtaining alcohol, using it, recovering from it
- important social, occupational, or recreational activities given up or reduced
- use despite knowledge of related physical or psychological problem
- craving (new)

*3 or more of these*
DSM IV Dependence Criteria in the form of questions

**Alcohol Dependence:**
**Sample Questions for Assessment Based on Diagnostic Criteria**

A diagnosis of alcohol dependence requires that the patient meet **three** or more of the following criteria, occurring at any time in the same 12-month period.

All questions are prefaced by “In the past 12 months…”

- **Drinking more or longer than intended:**
  Have you had times when you ended up drinking more than you meant to? Or kept on drinking for longer than you intended?

- **Impaired control:**
  Have you more than once wanted to stop or cut down on your drinking? Or tried more than once to stop or cut down but found you couldn’t?

- **Tolerance:**
  Have you found that you have to drink much more than you once did to get the effect you want? Or that your usual number of drinks has much less effect on you than it once did?

- **Withdrawal syndrome or drinking to relieve withdrawal:**
  - When the effects of alcohol are wearing off, have you had trouble sleeping? Found yourself shaking? Nervous? Nauseous? Restless? Sweating or with your heart beating fast? Have you sensed things that aren’t really there? Had seizures?
  - Have you taken a drink or used any drug or medicine (other than over-the-counter pain relievers) to keep from having bad aftereffects of drinking? Or to get over them?

- **Continued use despite recurrent psychological or physical problems:**
  Have you continued to drink even though you knew it was making you feel depressed or anxious? Or causing a health problem or making one worse? Or after having had a blackout?

- **Time spent related to drinking or recovering:**
  Have you had a period when you spent a lot of time drinking? Or being sick or getting over the bad aftereffects of drinking?

- **Neglect of activities:**
  In order to drink, have you given up or cut down on activities that were important or interesting to you or gave you pleasure?

- Download or order its 16-page booklet, Rethinking Drinking: Alcohol and Your Health

What are symptoms of an alcohol use disorder?
A few mild symptoms—which you might not see as trouble signs—can signal the start of a drinking problem. It helps to know the signs so you can make a change early. If heavy drinking continues, then over time, the number and severity of symptoms can grow and add up to an “alcohol use disorder.” Doctors diagnose an alcohol use disorder, generally known as alcohol abuse or alcoholism, when a patient’s drinking causes distress or harm. See if you recognize any of these symptoms in yourself. And don’t worry—even if you have symptoms, you can take steps to reduce your risks.

In the past year, have you (check all that apply and click the “Feedback” button, below):
- had times when you ended up drinking more, or longer, than you intended?
- more than once wanted to cut down or stop drinking, or tried to, but couldn’t?
- more than once gotten into situations where you or other people were in danger because of your drinking (such as driving, swimming, using machinery, working in a dangerous area, or having unsafe sex)?
- had to drink much more than you once did to get the effect you want? Or found that your usual number of drinks had much less effect than before?
- continued to drink even though it was making you feel depressed or anxious or adding to other health problems? Or after having had a memory blackout?
- spent a lot of time drinking? Or being sick or getting over other aftereffects?
- continued to drink even though it was causing trouble with your family or friends?
- found that drinking—or being sick from drinking—often interfered with taking care of your home or family? Or caused job troubles? Or school problems?
- gave up or cut back on activities that were important or interesting to you, or gave you pleasure, in order to drink?
- more than once gotten arrested, been held at a police station, or had other legal problems because of your drinking?
- found that when the effects of alcohol were wearing off, you had withdrawal symptoms, such as trouble sleeping, shakiness, restlessness, nausea, sweating, a racing heart, or a seizure? Or sensed things that were not there?

2-ITEM CONJOINT

• In the last year, have you ever drunk or used drugs more than you meant to?
• Have you felt you wanted or needed to cut down on your drinking or drug use in the last year?
  • 1 or more “yes” = approx. 80% sensitive and specific for abuse/dependence

1136 adults 18-59 in PC CRIT/FIT 2013
DAST-10

≥3 ‘yes’ = ‘need to assess further’

These questions refer to the past 12 months.

1. Have you used drugs other than those required for medical reasons?
2. Do you abuse more than one drug at a time?
3. Are you unable to stop using drugs when you want to?
4. Have you ever had blackouts or flashbacks as a result of drug use?
5. Do you ever feel bad or guilty about your drug use?
6. Does your spouse (or parents) ever complain about your involvement with drugs?
7. Have you neglected your family because of your use of drugs?
8. Have you engaged in illegal activities in order to obtain drugs?
9. Have you ever experienced withdrawal symptoms (felt sick) when you stopped taking drugs?
10. Have you had medical problems as a result of your drug use (e.g., memory loss, hepatitis, convulsions, bleeding)?

Saitz et al
Under review

CRIT/FIT 2013
**STEP 1**

Ask the patient about past drug use.

Which of the following substances have you used in your lifetime?

- **a. Tobacco products**
  (cigarettes, chewing tobacco, cigars, etc.)
- **b. Alcoholic beverages**
  (beer, wine, liquor, etc.)
- **c. Cannabis**
  (marijuana, pot, grass, hash, etc.)
- **d. Cocaine**
  (coke, crack, etc.)
- **e. Prescription stimulants**
  (Ritalin, Concerta, Dexamphetamine, Adderall, diet pills, etc.)
- **f. Methamphetamine**
  (speed, ice, etc.)
- **g. Inhalants**
  (nitrous, glue, gas, paint thinner, etc.)
- **h. Sedatives or sleeping pills**
  (Valium, Serepax, Xanax, etc.)
- **i. Hallucinogens**
  (LSD, acid, mushrooms, PCP, Special K, ecstasy, etc.)
- **j. Street opioids**
  (heroin, opium, etc.)
- **k. Prescription opioids**
  (fentanyl, oxycodone, hydrocodone, methadone, buprenorphine, etc.)
- **l. Other—Specify**

*Please report nonmedical use only; do not record medications that are used as prescribed by a doctor.*

Patient reports no lifetime drug use:
Reinforce abstinence. Screening is complete.

## Screening: Tools, ASSIST

**Patient reports lifetime use of one or more substances:**

Ask the following questions for each drug mentioned (scores will be tallied at the end). For Tobacco and Alcohol, go to page 6.

1. In the past 3 months, how often have you used each of the substances you mentioned (first drug, second drug, etc.)? 
   - Never: 0
   - Once or Twice: 2
   - Monthly: 3
   - Weekly: 4
   - Almost Daily: 6

If the answer to Question 1 is “Never,” skip to Question 5. Otherwise, continue: In the past three months...

2. How often have you had a strong desire or urge to use? 
   - 0
   - 3
   - 4
   - 5
   - 6

3. How often has your use of [first drug, second drug, etc.] led to health, social, legal, or financial problems? 
   - 0
   - 4
   - 5
   - 6
   - 7

4. How often have you failed to do what was normally expected of you because of your use of [first drug, second drug, etc.]? 
   - 0
   - 5
   - 6
   - 7
   - 8

**For each substance ever used** (i.e., those mentioned in the “lifetime” question):

- **NO**
  - YES, but not in the past three months
  - YES, in the past three months

5. Has a friend or relative or anyone else ever expressed concern about your use of [first drug, second drug, etc.]? 
   - 0
   - 3
   - 6

6. Have you ever tried and failed to control, cut down, or stop using [first drug, second drug, etc.]? 
   - 0
   - 3
   - 6

7. Have you ever used any drug by injection? (nonmedical use only) 
   - Recommend HIV/Hepatitis B & C Testing
   - Ask about pattern of injecting. Recommend HIV/Hepatitis B & C Testing

---

**Tobacco and Alcohol**

For any frequency of use in the past 3 months:

**TOBACCO USE**

Any current tobacco use places a patient at risk. Advise all tobacco users to quit.

**ALCOHOL USE**

Question the patient in more detail about frequency and quantity of use:

*How many times in the past year have you had:*

- For men: 5 or more drinks in a day?
- For women: 4 or more drinks in a day?

*If the answer is:*

- **None**—Advise patient to stay within these limits:
  - For healthy men under the age of 65: No more than 4 drinks per day AND no more than 14 drinks per week.
  - For healthy women under the age of 65: No more than 3 drinks per day AND no more than 7 drinks per week.
  - Encourage talking openly about alcohol and any concerns it may raise and re-screen annually.

- **One or more times of heavy drinking**—Patient is an at-risk drinker.

SCREENING: TOOLS, ASSIST

**STEP 2**

**Determine Risk Level**

For each substance (except tobacco and alcohol), add up the scores for questions 1 through 6. To determine patient's risk level and the respective recommendations, see below:

- **High risk**
  - Score > 27
  - Provide feedback on the screening results
  - Advise, Assess, and Assist
  - Arrange referral
  - Offer continuing support

- **Moderate risk**
  - Score 4-26
  - Provide feedback
  - Advise, Assess, and Assist
  - Consider referral based on clinical judgment
  - Offer continuing support

- **Lower risk**
  - Score 0-3
  - Provide feedback
  - Reinforce abstinence
  - Offer continuing support

Do this for EACH substance.

Summary

• Screen to identify the spectrum of unhealthy use
  • Includes (risky) use, problem use (and abuse), dependence
• Validated questions best
• Incorporate into health history, ask “matter of fact”
• Assess after a positive screening test
  • To confirm unhealthy use
  • To identify dependence (and consequences not meeting criteria)
