The Mobile & Electronic Health ARC (ME-ARC)

September Seminar

The Role of Emerging Technologies in Supporting the Health, Wellbeing, Independence, and Quality of Life of Older People

Presenter: Walter R. Boot, Ph.D.
Professor of Psychology at Florida State University

Tuesday, September 19th
12:00 – 1:00 PM
Via Zoom: https://bit.ly/me-arc

About the talk: The number of older people living in the US and around the world has increased, and technologies to help older people maintain wellbeing are being developed. In this session, Dr. Walter R. Boot, Professor of Psychology at Florida State University, will discuss studies that have examined the impact of existing and emerging technologies, developed using an iterative, user-centered design process. He will also address the effect of technology-based interventions on cognitive, behavioral, and psychosocial outcomes. This research has found that through careful design, scalable, useful, and usable technology solutions can provide tremendous benefit to older people.

ME-ARC PI & Director: Belinda Borrelli, Ph.D.
Leadership Team: Lisa Quintiliani, Ph.D. (Co-Director), Daniel Fulford, Ph.D., Joanne Murabito, M.D.
