MASTER OF SCIENCE IN HEALTHCARE EMERGENCY MANAGEMENT

Boston University School of Medicine
Graduate Medical Sciences

Program Overview

The M.S. in Healthcare Emergency Management prepares individuals for a variety of crisis management leadership roles, including risk and crisis communications. Unique in its emphasis on biomedical sciences and healthcare, students in the program are able to complete coursework on campus or virtually, while also benefitting from field-based exercises that provide critical hands-on learning experiences.

The program, which can be completed full-time in one year or part-time in two years, attracts students from around the world. Emphasizing the teamwork and collaboration requisite for professional success, the program produces highly sought-after graduates; many students have received job offers prior to completing the program. The average starting salary for recent graduates is \$78,000.

Program Highlights:

- The first program of its kind in the world
- Students can begin the 36-credit program in September or January and complete the program in either one or two years
- All classes are offered on campus and through a virtual classroom experience – the majority of students complete about 50% of the program's courses virtually, with a small percentage completing the program entirely online in order to accommodate work and life commitments
- Classes are taught by recognized experts in the fields of Emergency Management, Homeland Security, Disaster Relief, Incident Command and Simulation Modeling
- Students select several instructional field experiences from more than 50 offered around the world
- Participants have an opportunity to pursue paid internships for course credit
- Students complete a Research Practicum and Thesis, helping to improve global Crisis Management knowledge and practice
- High levels of mentoring and advising provided to support each student's success
- Scholarships are available to military and first responder personnel
- The degree is awarded by Graduate Medical Sciences at Boston University School of Medicine

“

I am currently employed at Stanford University in the Office of Emergency Management as a Program Coordinator. My primary role is to execute a campus-wide seismic mitigation project that will reduce the impact of an earthquake on essential campus operations by securing high value equipment. My MS-HEM is invaluable to this position.

CURRICULUM

The curriculum is designed to build strengths in five key areas:

- Crisis and disaster management including triage procedures and practices
- Incident and unified command and control methods and practices
- Risk communication including psychological and sociological impacts of crisis
- Crisis management for community-based medical care, services, and support systems
- Uses of modeling and simulation and risk planning methods and practices

Fall Semester:

Physics of Natural and Man-made Hazards	3 credits
Medical Consequences of Natural and Man-made Hazards	3 credits
The Disaster Life Cycle	3 credits
Methods and Practices of Incident Command	3 credits
Experimental Design and Statistics	2 credits

Spring Semester:

Psychology and Sociology of Disasters and Methods of Risk Communication	3 credits
Community Health and Emergency Management	3 credits
Principles, Methods, and Practices of Modeling and Simulation	3 credits
Ethical & Policy Issues in Health and Medical Services	3 credits
Emergency Management	
Directed Studies (Field experience)	2 credits
Research Practicum & Thesis:	2 credits
Designing Crisis Management Research	

Summer Semester:

Research Practicum & Thesis:	2 credits
Conducting Crisis Management Research	
Directed Studies (Field experience or hospital internship)	4 credits
