NYU Langone Health’s Vaccine Center, directed by Mark J. Mulligan, MD, leads pioneering vaccine-related research. As part of the Division of Infectious Diseases and Immunology in the Department of Medicine, our renowned experts in vaccine research merge basic science, clinical studies, and public health outreach to prevent the spread of disease.

Mulligan Lab Positions
Our overarching goal is to translate basic scientific knowledge to support the development of effective vaccines, therapeutic products, diagnostics, and predictive markers intended for clinical use. Below are available job opportunities in influenza and SARS-CoV-2 research.

**Postdoctoral Fellow**
We have postdoc positions available for currently funded projects and new projects in development.

**Associate Research Scientist**
We have an associate research scientist position available for an enthusiastic scientist interested in studying the immunological responses to vaccines. Preferred qualifications include an immunology background and a PhD.

To apply or obtain more information about our open positions, please email Mark J. Mulligan, MD, at mark.mulligan@nyulangone.org, Marie Samanovic-Golden, PhD, at marie.samanovic-golden@nyulangone.org, or Aaron Oom, PhD, at aaron.oom@nyulangone.org.
