

RESEARCH STUDY FOR EARLY-STAGE PARKINSON'S DISEASE

LACK OF TREATMENT OPTIONS

There are no current treatments that reverse, stop, or slow down the progressive loss of neuron function in patients with Parkinson's disease. The treatments that do exist treat only the symptoms associated with PD and provide only temporary improvement. These options often become less effective over time.

As a patient diagnosed with early-stage Parkinson's disease who has not yet received treatment for PD, your participation in clinical trials could help advance the development of treatment options for this disease. You can make a difference by filling a critical need for study volunteers in these trials.

About the **PRISM Parkinson's Research Study**

The **PRISM Parkinson's Research Study** is evaluating an investigational drug to determine if it might slow down the progression of Parkinson's disease (PD). Patients who enroll in this study will receive the study drug weekly over a period of 36 weeks.

Study Criteria

To participate in this study, patients must:

- Be 30 to 80 years old
- Have early-stage Parkinson's disease
- Not be on any current treatments for PD

Other criteria for eligibility apply. Study participants receive study-related medical exams and study drug at no cost. Compensation for time and travel may be available.

To see if you prequalify for the **PRISM Parkinson's Research Study**, please call or email Ray James at 617-638-7745 or rcjames@bu.edu.
